Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	**Stage 1: Data Discovery & Ingestion**	**Stage 2: Data Cleaning & Processing**	**Stage 3: Interactive Dashboard & Analysis**
Actions *What does the customer do?*	• Searches and downloads raw Olympic datasets (medals.csv, athlete.csv, athlete_events.csv). • Explores the initial structure of raw files. • Sets up Python/SQL workspace.	• Writes scripts to handle missing values and nulls. • Removes duplicate entries and standardizes text formats. • Merges datasets based on common keys.	• Imports cleaned data into Tableau / Power BI. • Applies dynamic filters (Year, Sport, Country/NOC). • Analyzes visual charts, bar graphs, and KPI cards.
Touchpoint *What part of the service do they interact with?*	• Kaggle / CSV Source Repositories • Python Jupyter Notebook / IDE file upload	• Pandas & NumPy Data Cleaning Functions • SQL Query Editor	• Tableau / Power BI Interactive Dashboard Interface • Visual Filter Panels
Customer Thought *What is the customer thinking?*	• "Are these raw datasets complete and reliable for my research?" • "How many messy rows do I need to clean up?"	• "I hope handling these missing values doesn't skew historical medal records." • "The merge is working, schema is looking better."	• "These interactive charts make trend comparisons so much faster!" • "Can I drill down into specific athlete physical traits easily?"

Customer Feeling *What is the customer feeling?*	• Overwhelmed • Curious	• Focused • Cautious	• Confident • Satisfied
Process Ownership *Who is in the lead on this?*	• Data Analyst (Shamaila Irfan)	• Data Analyst (Shamaila Irfan)	• Data Analyst / BI Developer (Shamaila Irfan)
Opportunities *How can we improve this stage?*	• Automate data import scripts to speed up file loading. • Use pre-validated dataset sources to reduce initial discovery time.	• Implement automated anomaly detection for faster missing value imputation. • Create reusable cleaning functions for future sports projects.	• Add advanced predictive analytics or forecasting models. • Optimize dashboard rendering performance for instant filter response.
