Performance Test

Date	21 October 2026
Team ID	EN25CS3010849
Project Name	**Global Olympic Sports Performance Analysis**
Maximum Marks	

Project Performance Testing:

The project team shall fill the following information in the Project performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Tables loaded: athlete.csv,medals_results.csv,alltime_country_ranking.csv and games_summary.csv Records count: 135,571 records(in athlete) File size : 45MB to 50MB
2.	Data Preprocessing & Quality	Null & missing value checks: checked al data columns across the three tables for null values; missing values in optional fields(such as secondary attributes or team details) were handled using appropriate imputation and data filtering methods. Duplicates Checks: Scanned the datasets and successfully identified and removed duplicates rows to ensure data integrity. Data Standardization: Trimmed extra whitespaces from text columns(athlete names, country names, medal categories) and standardized text case formats across all three CSV files.
3.	New Fields Created	Total Medals Calculation: Total Medals = Gold + Silver + Bronze (calculated to get the aggregate medal tally for each country/athlete). Medal Performance Ratio: Created a calculated ratio field to measure the success rate of athletes based on total events participated versus medals won. Athlete categorization: created conditional grouping fields to categorize athlete based on their event types and performance brackets.
4.	Filter Efficiency Test	Country / NOC filter (to view specific nation statistics) Medal type filter (Gold, Silver, Bronze) Sport/Discipline Filter (to filter performance by specific olympic sports)

		Performance Results: Query and data rendering remained exceptionally fast and efficient when multiple filters were applied simultaneously across medals.csv and athlete.csv.
5.	Dashboard & Visualization Testing	No of Visualizations / Graphs - 6 Visualizations
6	Query History	Query with Highest Execution time: the multi-table inner join operation combining medals.csv, athlete_summary.csv and athlete.csv to aggregate total medals won by each athlete along side their event profiles.
